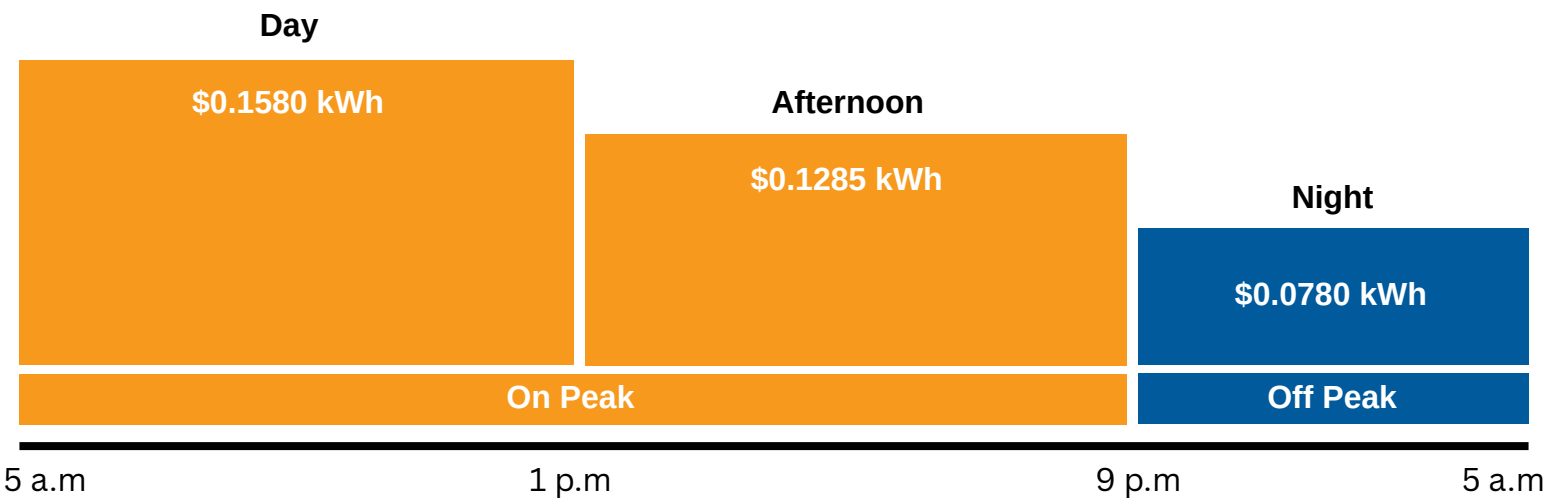
Time of Use Rate Plan

New Rate Schedule

Cooperative Light and Power (CLP) is introducing a new Time-of-Use (TOU) rate designed to offer dependable and cost-effective energy. This TOU rate enables members to manage and control their energy expenses effectively.

Time of Use rate plan has three periods (Day, Afternoon, and Night)



Service Availability Charge (SAC) Flat Fee of $69

The pricing shown in this graph represents the total energy cost, also displayed on the bill as a kWh price. This does not include additional charges, such as the Service Availability Charge.

Giving YOU Control

With a Time of Use Plan, the timing of energy usage is as crucial as the amount consumed. Members benefit from reduced prices during off-peak hours, making both the usage time and the power more cost-effective.

Costs are increasing everywhere, but members who embrace the TOU rate and adjust their electricity usage to off-peak times can discover wonderful opportunities to save both energy and money.

Your Touchstone Energy® Partner

Benefit of Time of Use

If you're considering switching to a TOU rate, it's worth evaluating your lifestyle and energy habits to see how much you could save. TOU rates work best for households that are flexible with their electricity use or use significant energy during off-peak hours, allowing CLP to avoid peak demand charges, enabling us to pass those savings on to our members. Small changes can lead to a significant reduction in your total annual energy costs.

Enhance your savings by operating these appliances during off-peak hours when prices are lower.

EV

Hot Water

Electric HVAC

Clothes Dryer

Electric Stove

Dishwasher

Did you know?

Electricity demand reaches its highest point in the evening as solar generation declines and individuals come home from work, using their appliances and air conditioners. To meet this surge in demand, fossil fuel power plants are usually employed. By minimizing your electricity consumption during these peak periods, you contribute to lowering the carbon emissions linked to electricity generation.

Want to know more?

Please contact CLP's Energy Services Department to ensure it's a good fit for you.

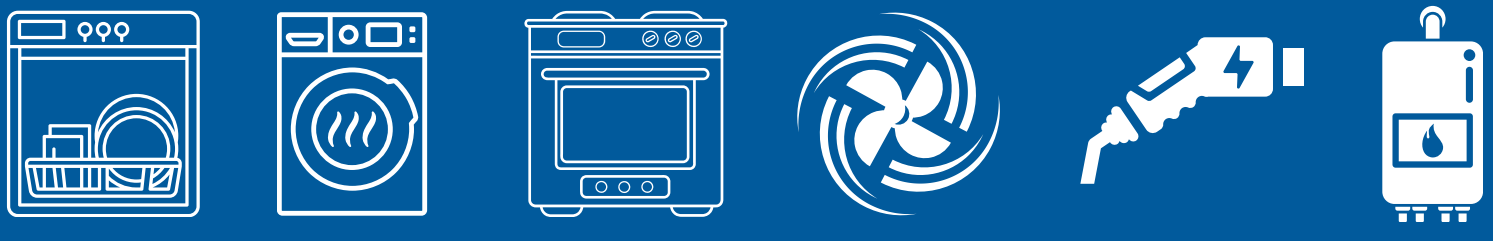
Benefit of Time of Use

Enhance your savings by operating these appliances during off-peak hours when prices are lower.

Dishwasher | Clothes Dryer | Electric Stove | Electric HVAC | EV'S | Hot Water



By moving your electricity consumption to times of lower demand (off-peak), you can save both energy and money.

Adjusting your electric usage to off-peak hours enables CLP to bypass peak demand charges, allowing us to share those savings with our members. Small adjustments can lead to a noticeable decrease in your total annual energy expenses.
