

Providing reliable electric service through vegetation management.

Vegetation on power lines can adversely impact the reliability of your electric service. To minimize power interruptions or hazards to line workers and the public resulting from overgrowth, Cooperative Light and Power (CLP) uses an environmentally responsible vegetation management program to control the natural plant growth within the power line right of way; a critical part of this program is herbicide application. Our objective with herbicide application is to keep power lines clear of tall-growing plants while maintaining low-growing vegetation for wildlife habitat.

We use professional, licensed contractors to apply herbicide by utilizing different methods including foliar, stump, stem and vine applications.

CLP contractors have been trained on the proper, safe and environmentally responsible techniques of managing plant growth. All products used by CLP's contractors are approved by the Environmental Protection Agency and appropriate state agencies.

If you have any questions about CLP's vegetation management program, please review the information on our website at www.clpower.com or call 218-834-2226.
